

How represented values may shape innovation and its costs

Observed score gaps below; dashed amber links and economic outcomes are illustrative.

Six value questions

Survey or model description

Q48 agency + Q159 science

Q57 trust + Q121 immigration

Q106 equality –

Q108 individual provision

Assumed mechanism

Not estimated decisions

$\lambda \cdot$ innovation arrival

chance of replacement

$a \cdot$ transition assistance

Two outcome channels

Same choices, different stakes

$G \cdot$ efficiency channel

Higher = more quality gain

$U \cdot$ transition equity risk

Higher = more exposure

Observed | Nigeria vs survey

Signed score: left = less of that view

Agency

Trust

Income equality*

Individual provision

Immigration*

Science opportunity

○ GPT-5.5

● GPT-5.6 Sol

* wording

Conditional | G and U

Assumed investment + aid; gaps vs survey

Place	G ↑ : more gain		U ↑ : more risk	
Nigeria	-1.57	↓ -1.69	-1.48	↑ -1.11
Afr.–Islamic	-0.90	↓ -1.01	-1.03	↑ -0.76
Kenya	+0.68	↑ +0.70	+0.51	↑ +1.27

↑/↓ : 5.5 to 5.6 Sol; G pp, U per 100 activities.
