

How represented values may shape innovation and its costs

Observed score gaps below; dashed amber links and economic outcomes are illustrative.

Six value questions

Survey or model description

Q48 agency + Q159 science

Q57 trust + Q121 immigration

Q106 equality –

Q108 individual provision

Assumed mechanism

Not estimated decisions

$\lambda \cdot$ innovation arrival

chance of replacement

$a \cdot$ transition assistance

Two outcome channels

Same choices, different stakes

$G \cdot$ efficiency channel

Higher = more quality gain

$U \cdot$ equity risk

Higher = more exposure

Observed | Nigeria vs survey

Signed score: left = less of that view

Agency

Trust

Income equality*

Individual provision

Immigration*

Science opportunity

○ GPT-5.5

● GPT-5.6 Sol

* wording

Conditional | G and U

Model-guided minus survey-guided

Place	G ↑: more gain	U ↑: more risk
Nigeria	$-1.57 \rightarrow -1.69$	$-1.48 \rightarrow -1.11$
Afr.–Islamic	$-0.90 \rightarrow -1.01$	$-1.03 \rightarrow -0.76$
Kenya	$+0.68 \rightarrow +0.70$	$+0.51 \rightarrow +1.27$

5.5 $\rightarrow$ 5.6 Sol; G in pp, U in index units.
